

Esophageal Impedance pH Study

About Esophageal Impedance pH Testing

The provider performs the gastroesophageal reflux test to determine the backflow of acid from the stomach into the esophagus with a nasal catheter intraluminal impedance electrode placement for more than 1 hour and up to 24 hours. A computer records the data, which the provider interprets.

Indications for Use

Esophageal Impedance pH study is typically ordered for patients with gastroesophageal reflux disease, dysphagia (difficulty swallowing), heartburn, or other esophageal symptoms.

Billing

Listed below are the specific billing code and associated fees for the Esophageal Impedance pH test. The actual allowed amount (the amount of the billed charge deemed payable by an insurance plan) for each charge and the amount of your out-of-pocket expenses will depend on your particular insurance plan. It is important to check your individual policy and direct any questions to your insurer to determine coverage and your financial responsibility prior to receiving treatment.
